

Why the Big Trend Is *Space Optimization*

The last couple of years have seen big changes among global transportation companies. When carriers shifted to dimensional pricing models, shippers were forced to react – and they've done so in a big way. There's now a huge trend toward space optimization – on the pallet, in the warehouse and in transport.

Learn more about these changes in this informative video with Honeywell President Lisa London.

How Bad Dimensioning Affects Good Parcel Companies and Warehouses

Parcel companies and warehouses are increasingly focusing on space optimization at their retail counters and in their DCs.

In this informative Honeywell Tech Talks video, Honeywell Director Steve Sundstrom explains why. Learn how parcel companies and warehouses are gaining operational efficiencies, cutting costs and increasing revenue through space optimization.

A Revolution in Affordable Dimensioning Technology

The need for fast, accurate dimensioning – for both the retail counters of parcel companies and space optimization in warehouses – is clear. What isn't clear: how these companies can justify the cost of existing dimensioning solutions.

Now, they can. AutoCube™ is a new fixed dimensioning solution from Honeywell that instantly and accurately captures the dimensions of an object – even multiple objects in irregular sizes and shapes. And it does so at a fraction of the cost of competitive solutions.

In this video, Honeywell Senior Product Manager Praveen Issac introduces you to AutoCube and the revolutionary advances in technology it represents.

Get Maximum Value from Your Warehouse and Vehicle Fleet

With the rising costs of warehouse rents and vehicle fleet management, distribution centers are under increasing pressure to optimize space – on the floor and in the truck. That's why the new AutoCube™ fixed dimensioning system is such an important advancement for today's DCs.

AutoCube measures package dimensions instantly and with extreme precision – under a second and within millimeters. This gives warehouse managers and workers reliable metrics to maximize both warehouse storage space *and* vehicle loads.

Maximize Space in the Truck and on the Manufacturing Floor

Knowing the precise dimensions of every product can help manufacturers optimize many workflows – like picking and packing, returning stock and shipping. That's why the new AutoCube™ fixed dimensioning system is such a breakthrough for manufacturers.

Using advanced, 3D sensing technology, AutoCube instantly and accurately captures package dimensions. Manufacturers can use this information to ensure accurate shipping manifests, optimize storage space – and even enhance the design of their facilities.

Service Customers and Their Packages Quicker Than Ever

The measuring tape is still the standby to capture package dimensions at the retail counters of many parcel companies. The problems with this are obvious – slower service, longer lines and less-satisfied customers. Add the risk of inaccurate measurements resulting in less revenue, and it's clear there has to be a better way.

With the new AutoCube™ fixed dimensioning system from Honeywell, there is. AutoCube captures accurate package dimensions instantly and with extreme accuracy – enabling employees to provide faster service, work more efficiently and capture more revenue.

Take your retail shipping operations to a new level of efficiency with AutoCube.
