

Smartphones aren't made for concrete.

Intermec mobile computers can handle up to an eight-foot drop to concrete. And have a very friendly impact on your bottom line.

When teams are in the warehouse or in the field, "Oops!" happens – and if they're using commercial smartphones, the costs add up fast. Intermec mobile computers are built to shrug off concrete, dust, and rain – and to deliver vastly superior business capabilities.

With the Intermec CS40 Mobile Computer you get the tough, dependable construction of an industrial-grade device with versatility and feel of a smartphone. Users can quickly scan 1D and 2D bar codes with the dedicated imager, update inventory, send messages, take photos, make calls and download files. Best of all, total cost of ownership is up to four times better than a smartphone. And you can drop it from 1.2m to concrete, guaranteed.
