

Hospitals can significantly reduce medication errors by scanning at the point of care.

(Now that's an easy pill to swallow.)

Source: "1" Bar Code Label Requirements for Human Drug Products and Biological Products, Final Rule" Department of Health and Human Services, Food and Drug Administration. *Federal Register* Notice, February 26, 2004 (volume 69, number 38) page 9120. Viewable online at www.fda.gov/DHRMS/DOCKETS/98fr/04-4249.htm.

According to the FDA, there are multiple medication error sources in the healthcare chain. Hospitals can eliminate 50% of medication errors by matching patients to medication at the point of care with a quick bar-code scan for confirmation. That's why Intermec designs simple, dependable solutions specifically for the point of care - like our snappy line of healthcare scanners and speedy PC23d printer, both designed for patient wristbands and other medical uses.
