Easy. Flexible. Complete.

CV61: Maximize the Potential of Your Forklifts

In the distribution center, few functions are more critical--and costly--than maintaining the peak productivity of your forklift fleet. The new Intermec CV61 was built to answer this challenge.

Optimized to reduce forklift operator downtime, enhance safety and seamlessly integrate with your IT infrastructure, this computer is a true performance workhorse. The CV61 utilizes high performance components: a 12.1" XGA outdoor readable display, a 1.8 GHz Intel® Atom processor, up to 3GB of user-expandable memory, and support for Microsoft Windows 7 or XP Professional.
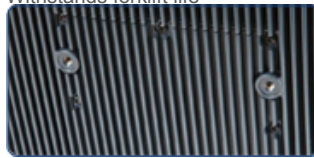

As you would expect from Intermec, all of these components are wrapped in a rugged enclosure rated for IP66 protection from water and dust. Extensive shock and vibration testing—beyond the MIL-SPEC standard—ensures CV61 will stand up to the rigors of forklift life.

Those familiar with our longstanding CV60 vehicle mount computer will find migrating to CV61 easy. Designed to be compatible with CV60 mounting, cabling, keyboards, trays, scanners and printers, the CV61 will save you money and installation time.

Better yet, the CV61 offers the accuracy, productivity and safety of hands-free voice directed work. Support for Vocollect VoiceCatalyst is built-in. Read our "Voice Enabled Forflift" whitepaper at the link below, and take your forklift fleet to new heights.

Withstands forklift life

Standard ANSI mounting

Docking system and UPS

Considering voice for your forklift?
