

Easy. Flexible. Complete.

CV41: Maximize the Potential of Your Forklifts

To stay ahead in today's competitive business environment, you're being challenged to contain costs and drive additional efficiencies wherever possible. In the distribution center, few functions are more critical--and costly--than maintaining the peak productivity of your forklift fleet.

The new Intermec CV41 was introduced to solve this challenge. Built to reduce forklift operator downtime, enhance safety, and provide incredible visibility into fleet utilization, the CV41 is an 8" (20 cm) vehicle mount computer designed to maximize every minute of your forklift operations.

Better yet, the CV41 offers the accuracy, productivity and safety of hands-free voice directed work. In fact, it is the only Windows® CE vehicle-mount computer on the market with Vocollect VoiceCatalyst. Read our "Voice Enabled Forklift" whitepaper at the link below, and take your forklift fleet to new heights.

Perfectly sized for forklifts

Familiar user interface

Docking system and UPS
