

Easy. Flexible. Complete.

## CV41: Maximize the Potential of Your Forklifts

To stay ahead in today's competitive business environment, you're being challenged to contain costs and drive additional efficiencies wherever possible. In the distribution center, few functions are more critical--and costly--than maintaining the peak productivity of your forklift fleet.

Intermec vehicle mount computers were made for this challenge. Building on the success of the Intermec CV30, the new CV41 is similarly compact but includes the latest technology, an innovative hybrid dock mounting system, and support for Vocollect Voice.

Migrating to CV41 from a legacy Intermec computer is easy. The device is resilient enough to handle touch distribution center jobs, and the included Intermec IDL Developer Toolkit and Intermec Client Pack make migrating application software and deploying it in multi-device environments simple.

Better yet, the CV41 offers the accuracy, productivity and safety of hands-free voice directed work. In fact, it is the only Windows® CE vehicle-mount computer on the market with Vocollect VoiceCatalyst. Read our "Voice Enabled Forklift" whitepaper at the link below, and take your forklift fleet to new heights.

Perfectly sized for forklifts
